

20), (3, 'c', 20)

Day 5

## Constraints

• Table field set of Rules / Regulation Apply

|                     |   |             |   |   |
|---------------------|---|-------------|---|---|
| can't be null.      | → | not null    | → | id int not null (it should not be null) |
| No duplicate values | → | unique      | → | username varchar(20) unique             |
| for insert check    | → | check       | → | salary int check (salary > 0)           |
| set default value   | → | default     | → | age int default 18                      |
| unique field use    | → | Primary key | → | id int Primary key                      |
|                     |   | foreign key |   |   |

### default @ways:

(1, 'ari', default)

(2, 'arushi', 33) → over value

(3) no, strange values (2, 'ajith') # default will come

### unique / Primary key :

unique → we can create 'n' no of times

P.K → only applies for one field

P.K → not null will apply automatically

(SP-HELP tablename) / constraint name

Remove → ALTER table tablename drop constraint.  
constraintname

Existing table different field Primary key set

alter table tablename alter column mob bigint not null

alter table tablename add constraint constraintname

primary key (mob)

(SP-help tablename)
